

Improve Maintenance Performance and Drive Efficiency with Maintenance Connection

REDUCE DOWNTIME AND ENHANCE LABOR PRODUCTIVITY

More than 350,000 maintenance professionals across the world use Accruent's Maintenance Connection to improve their facility operations. This comprehensive multi-site CMMS allows manufacturers to streamline maintenance processes by moving to proactive maintenance management, reducing downtime and lowering maintenance costs.

Make better decisions with access to the right information at the right time

Better utilize your mission-critical staff

Gain insight across your maintenance operations

EFFICIENT WORKFLOW, BETTER MAINTENANCE INTELLIGENCE

Maintenance Connection saves time by giving you access to the right information when and where you need it. Improve the utilization of your most important asset: your maintenance technicians. Using Maintenance Connection's mobile solution, MC Express, maintenance teams can avoid extra trips back to the office and eliminate the need for printouts. Maintenance teams can use mobile devices to manage work orders and call up relevant asset documentation, increasing productivity and speeding time to repair. Manufacturers are able to build asset and work order histories that provide insight to help improve performance.

MAKE BETTER DECISIONS

- Record and access critical PM data across multiple locations
- Monitor manufacturing related specifications and metrics to decide how and when PMs are performed
- Keep teams and operations aligned by providing a single source of PM information

INCREASE PRODUCTIVITY AND LABOR EFFECTIVENESS

- Complete work orders from the field with the mobile application
- Measure maintenance performance and service effectively with precise repair information tracking
- Know exactly how many hours are spent on a maintenance request and get accurate costing information for each work order hours spent on maintenance requests

CUSTOMIZE REPORTS TO MATCH UNIQUE REQUIREMENTS

- Define and assign metrics, KPI and reports with flexible reporting, unique to specific sites and levels
- Diagnose and prevent equipment crashes by accessing and analyzing history reports
- Inform all layers of management with up-to-date maintenance performance reviews

ROBUST WORK ORDER MANAGEMENT

- Deliver important work order requests to your team
- Customize work order status tracking to improve accuracy
- Record important work order information from the field

“One factor we measure is the utilization of our mechanics. We are always trying to bring that percentage up as high as we can. Now, one way we can do that is by not having them waste time going back to a central location to close out a work order. Everything is done remotely.”
