

# TOP 5 REASONS TO ADOPT AUTODESK® INSIGHT™

For Building Performance Analysis

## A powerful cloud based analysis tool in the AEC Collection

Insight cloud service further empowers architects and integrated design teams with centralized access to building performance analysis data and advanced simulation engines.

- 1 No additional cost**  
Included as part of your Revit and AEC Collection subscription.
- 2 More accurate**  
than leading competition.
- 3 True BIM integration**  
No more throw-away models! Insight works with FormIt Pro and Revit. Doing conceptual design in FormIt and transitioning to Revit avoids having to create a throw-away model, as you might with other tools. No special, customized model is required with Insight, saving both time and money.
- 4 Real-time feedback**  
in the form of EUI/energy cost mean. Competitive tools may claim to provide real-time feedback, even though it only works during conceptual massing, while Insight also provides this feedback with schematic or complex models.
- 5 Easy-to-use tool**  
Built for architects, and as highly accurate as engineering tools for energy analysis. Additionally, it lends itself to the iterative process of design.
